After Boot Oracle Linux

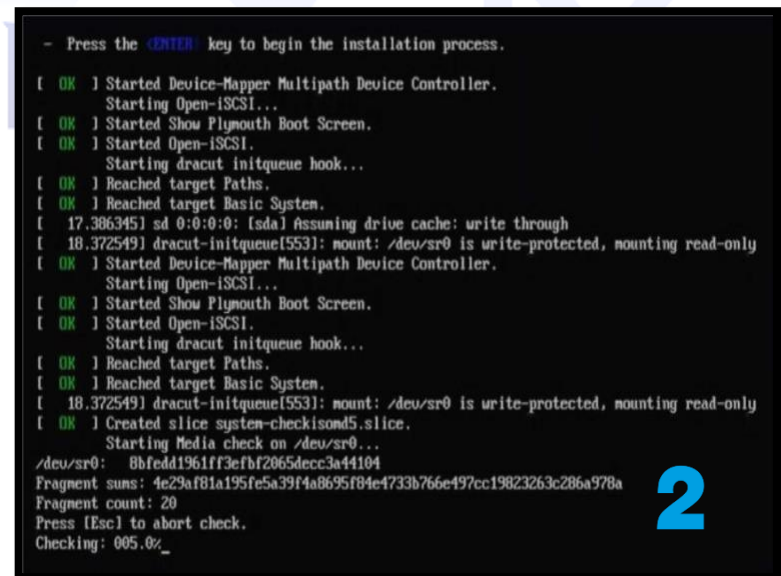

This Red Window Appears

Choose Install oracle Linux 7.4 (figer1)

The Next Step Is to Wait Until Finishing Auto-CHECK As Showing in (figer2)

Then

2 This Step You Can Choose English Language To Be Used in Installation Progress Then Continue ..

3 This Window Will Appear Which has Essential Setting That Oracle Linux Will be Built on it .

First Open **DATE&TIME** Setting

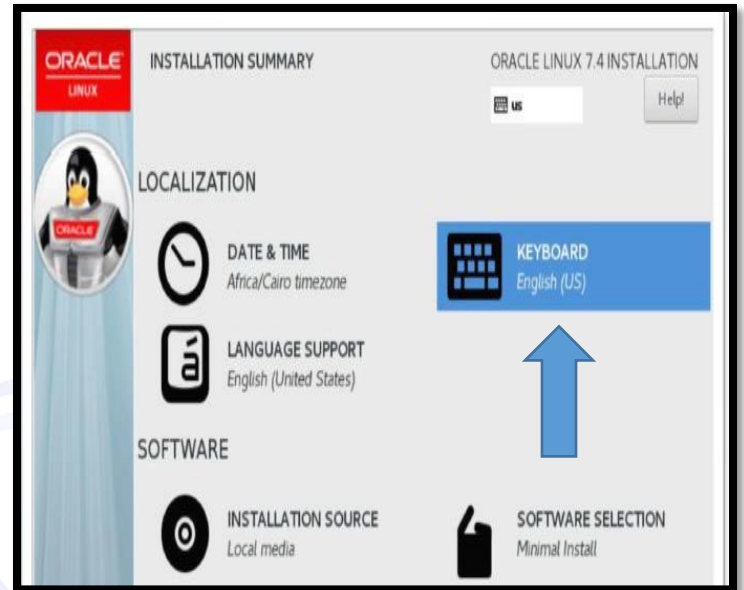

You Must Choose The Zone Of The Client Country And Edit Time& Date As The Current Time .

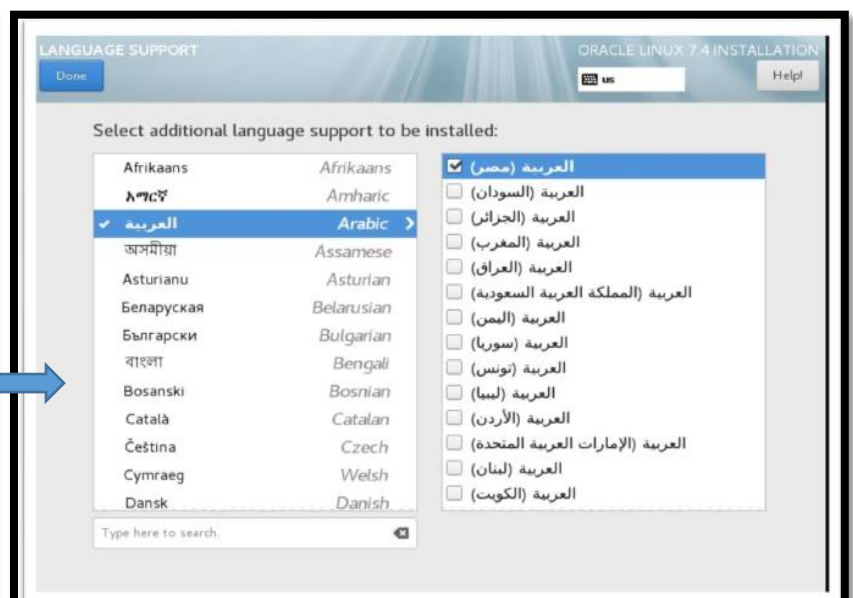

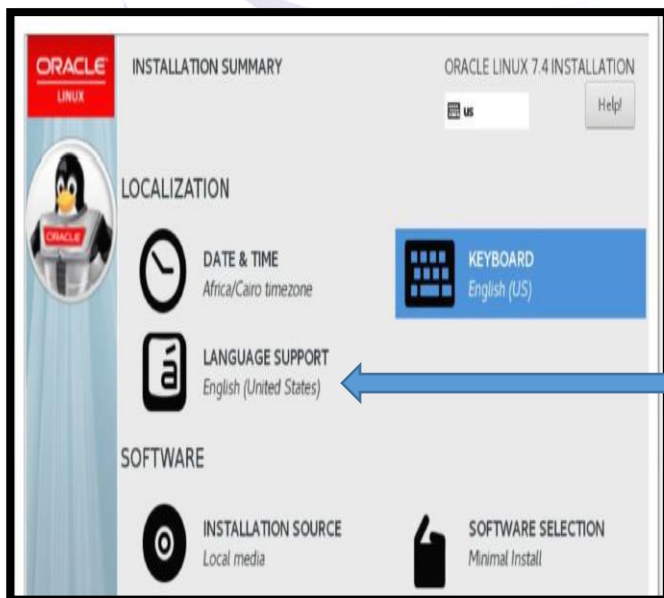

Then Done....

Second Open **KEYBOARD** to Choose Languages That you will use in Linux To Write Like (Arabic, English..)

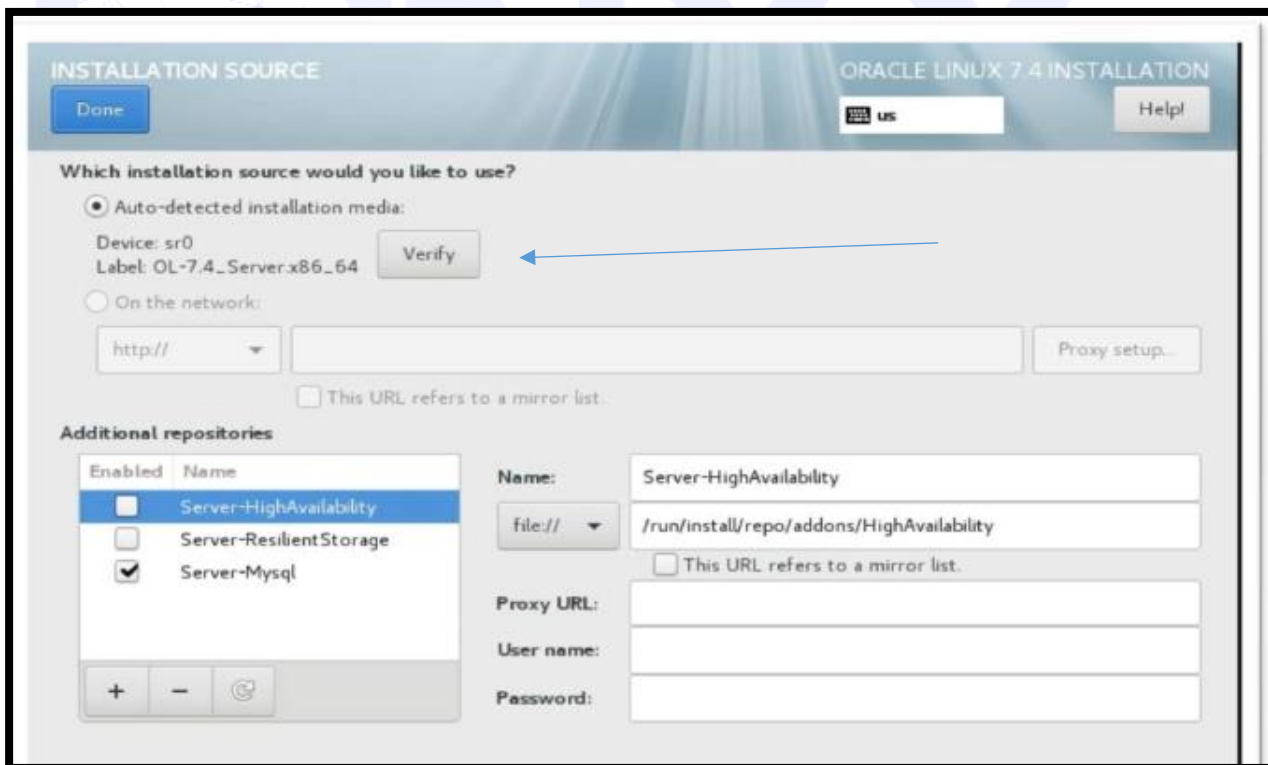

Third Open **LANGUAGES SUPPORT** to Choose All Languages That Will Be Supported In Linux Like (ARABIC , ENGLISH , SPANISH , FRENCH etc) - Then **Done**

Fourth Open **INSTALLATION SOURCE** Then Click on **Verify**

➔ This step for verifying The ISO of Linux Good Or Bad

Fifth Open SOFTWARE SELECTION and Choose (AS Shown in figuer)

Base Environment (Left Side)

Choose:

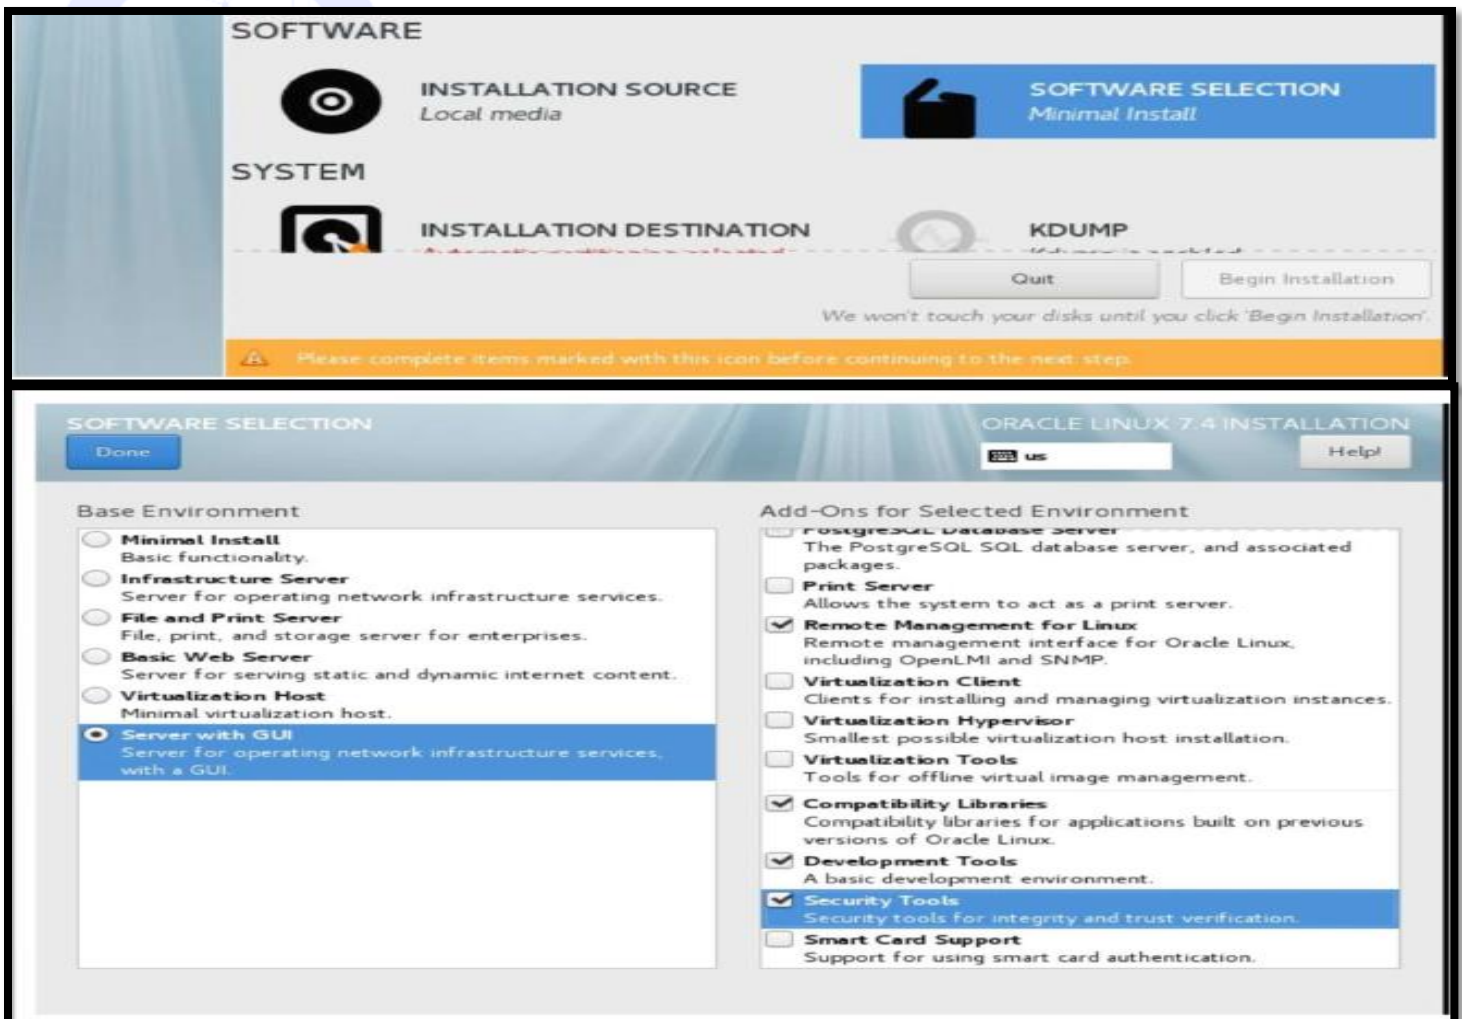

→ Server With GUI

"It's feature is the graphical interface"

Add-ons For Selected Environment :

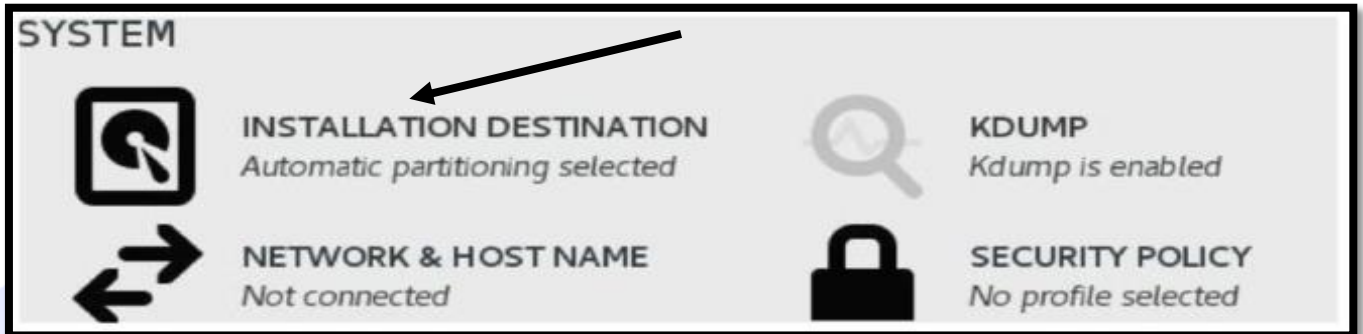

Choose:

- Remote Management for Linux
- Compatibility Libraries
- Development Tools
- Security Tools
- Hardware monitoring utility
- Large system performance

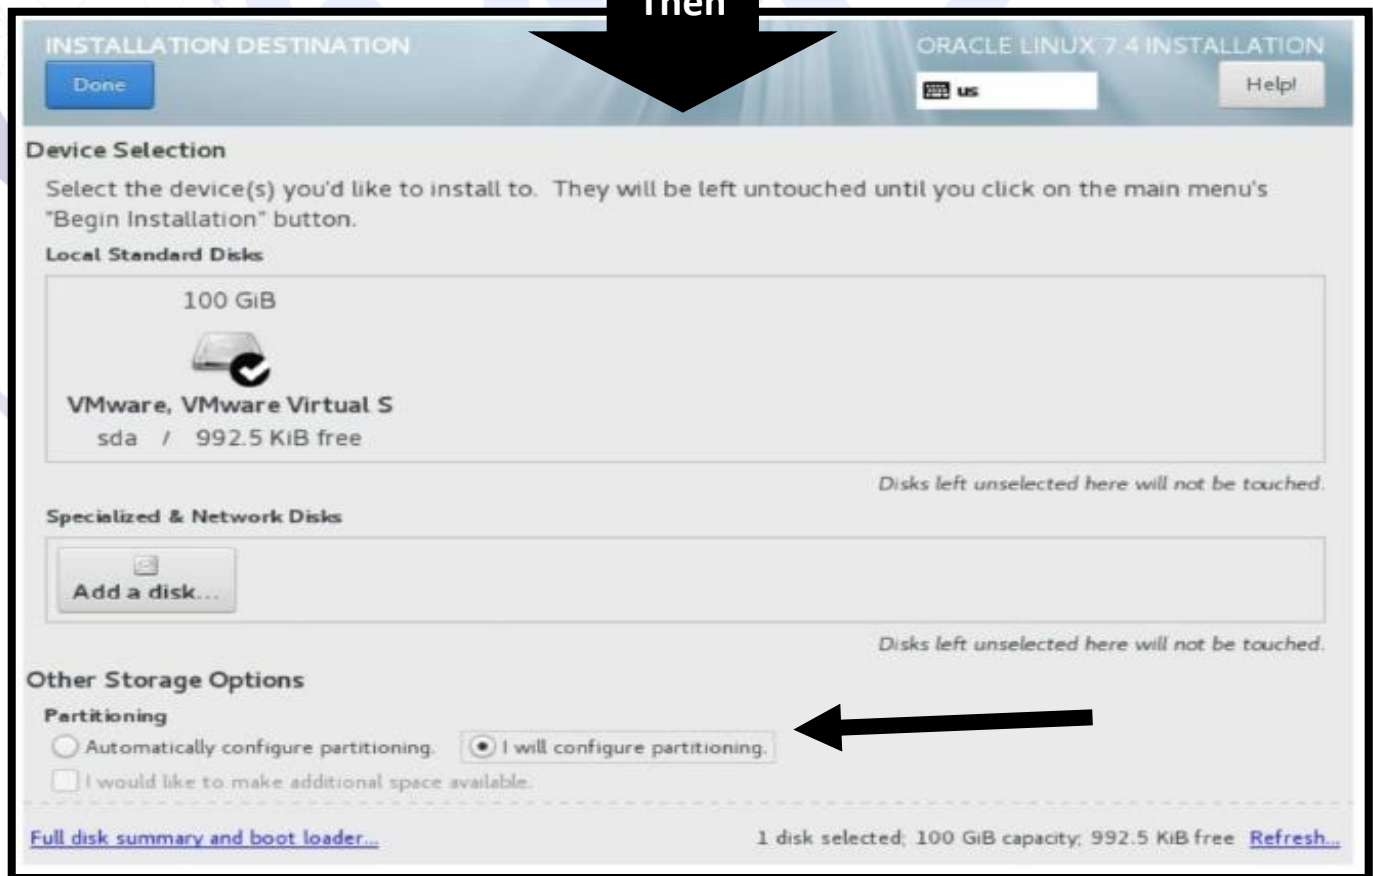

Sixth Open INSTALLATION DESTINATION for Configuring Partitioning

→ To select the disks and partition the storage space on which you will install .

Then

→ Choose **I Will configure Partitioning** (For Manually conjure Partitioning) then [Done](#)

Notes : Linux Deal with all Harddisk as an one Partition.

[[If There are 2 Harddisk – setup DB on The Second One (recommended).]]

At First

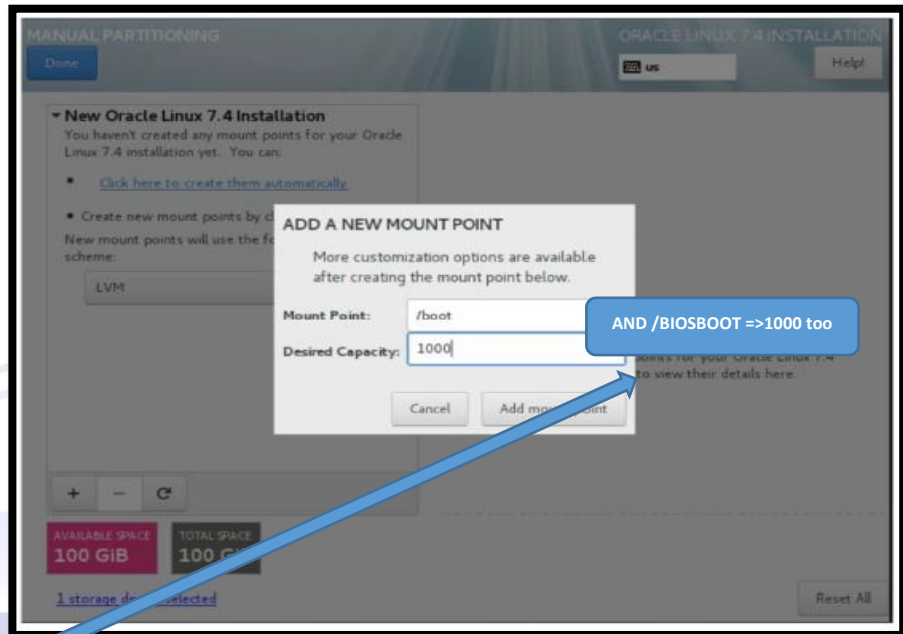

+ Add **(/Boot)** mount point

Desired Capacity → **1000mb**

Then Click on Add mount point

Note:

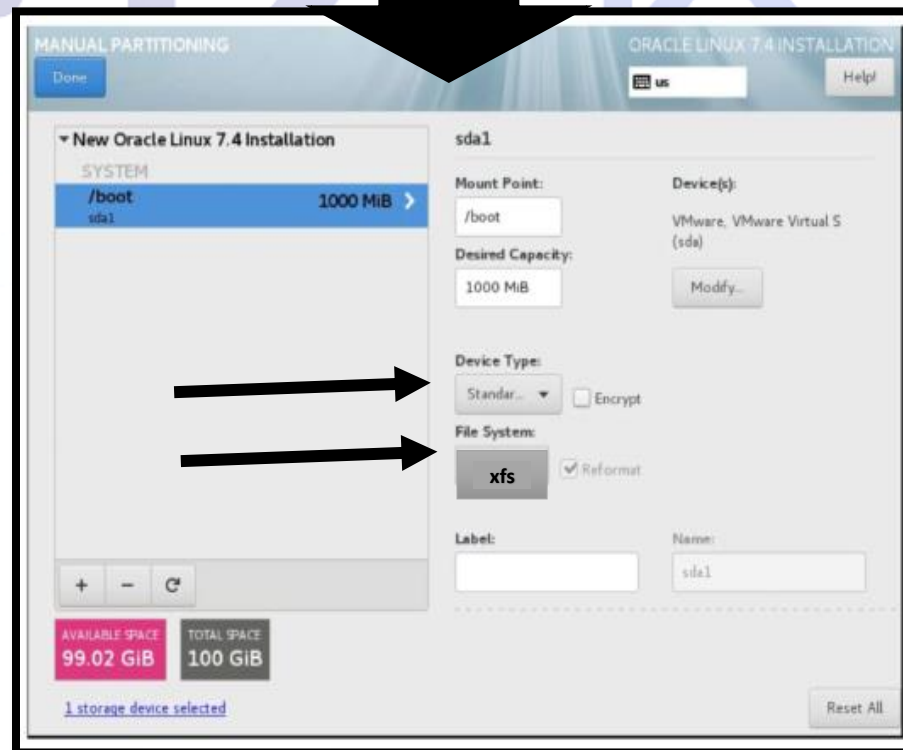

If there is **BIOSBOOT** IN MOUNT POINT LIST
Deal with it like **(/Boot)** setting

THEN

Device Type → **Standard**

File System → **xfs**

Secondly

+ Add **(Swap)** mount point

Depend on RAM size

Swap Equation is:

→ $\text{swap}(\text{ram} \leq 16) = 2 * \text{ram}$

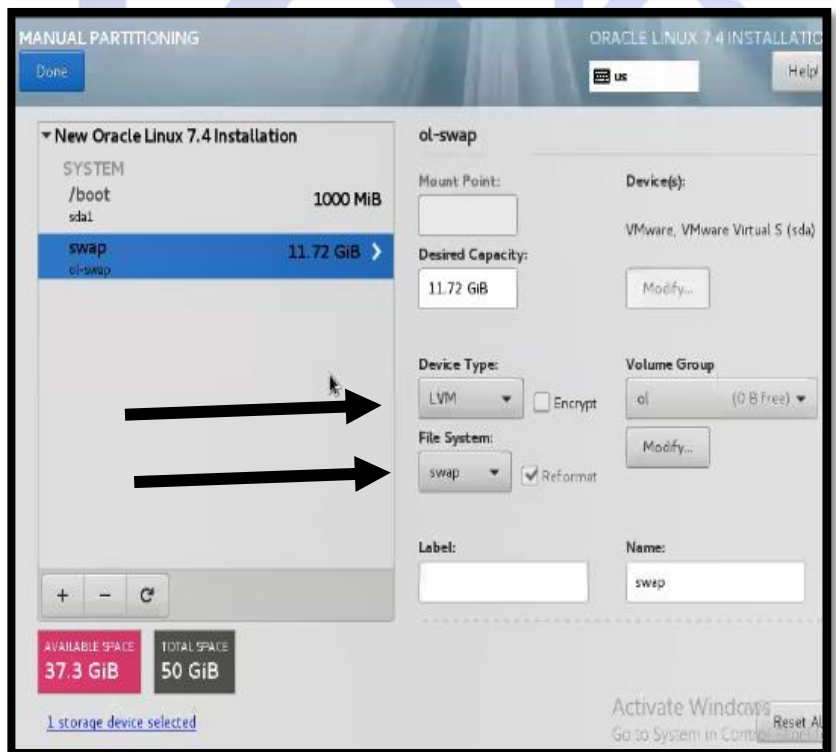

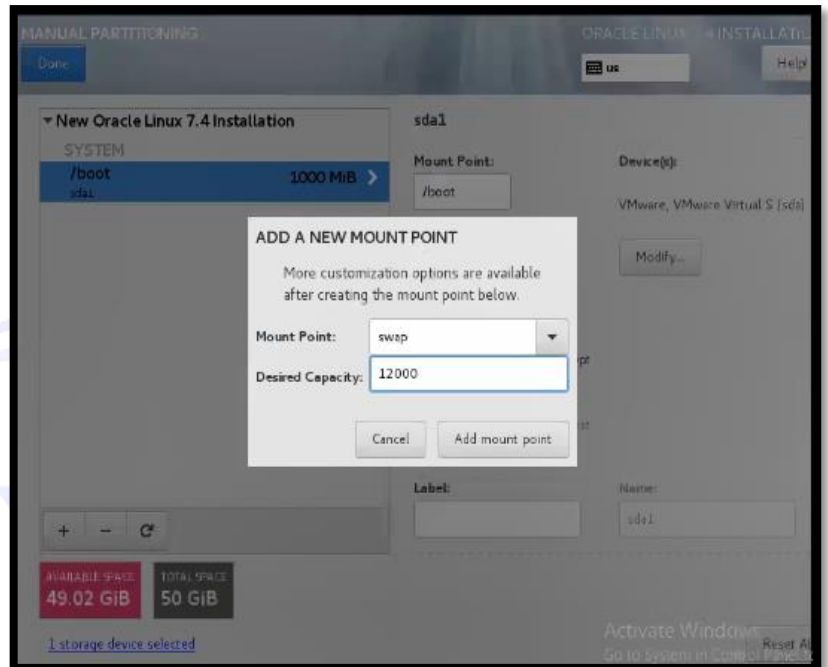

→ $\text{swap}(\text{ram} > 16) = \text{ram}$

Example: My Ram = 6 GB

My Swap = $6 * 2 = 12000\text{mb}$

Device Type → **LVM**

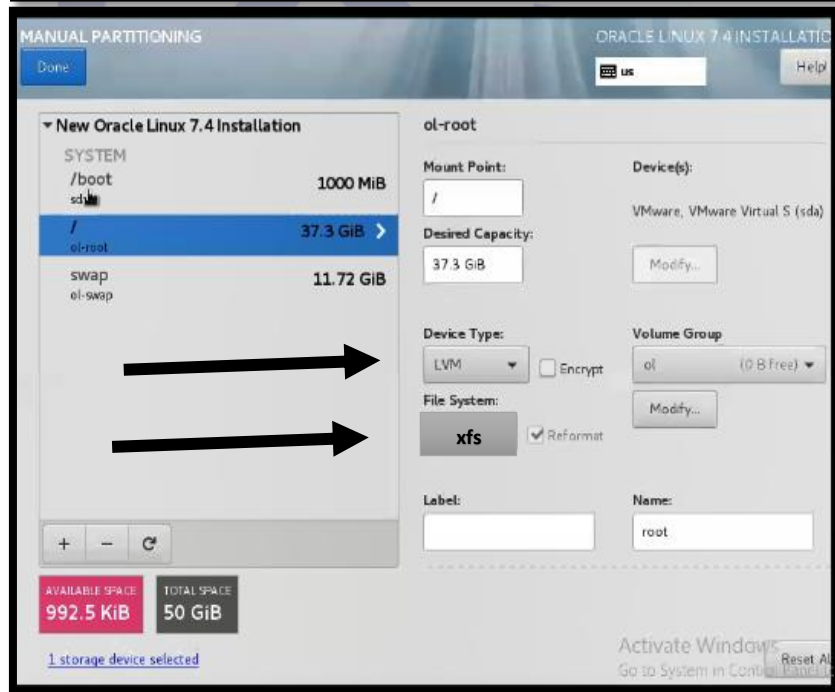

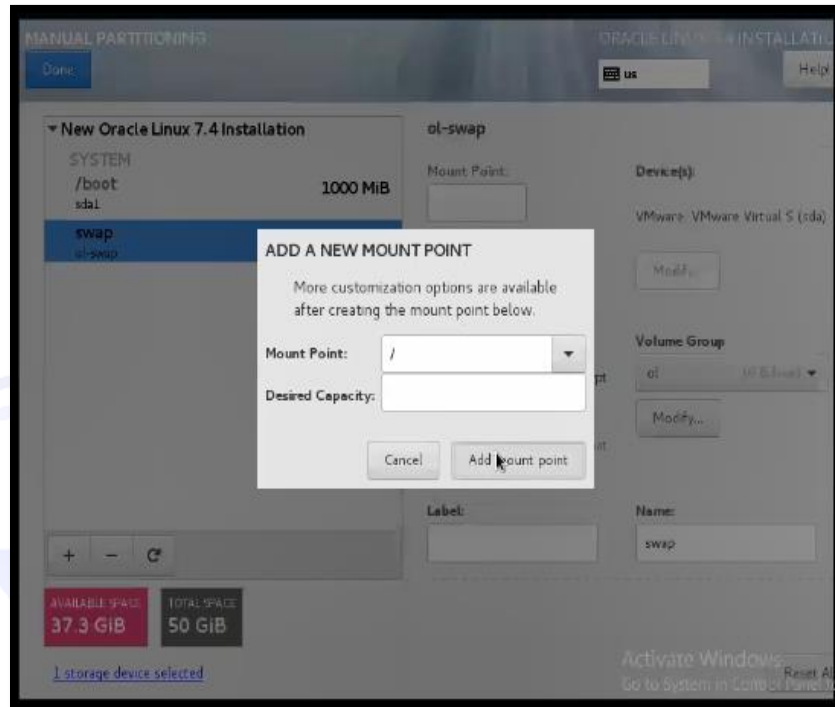

File System → **Swap**

Thirdly

+ Add (/) root Without Write Value in Desired Capacity

Note: (/) Take the available capacity automatically

Device Type → **LVM**

File System → **xfs**

Then **“Done”**

This Summary Appears after finishing partitioning Step

Click On Accept changes if everything is Okay

SUMMARY OF CHANGES
Your customizations will result in the following changes taking effect after you return to the main menu and begin installation:

Order	Action	Type	Device Name	Mount point
1	Destroy Format	Unknown	sda	
2	Create Format	partition table (MSDOS)	sda	
3	Create Device	partition	sda1	
4	Create Device	partition	sda2	
5	Create Format	physical volume (LVM)	sda2	
6	Create Device	lvmvg	ol	
7	Create Device	lvm lv	ol-root	
8	Create Format	ext3	ol-root	/
9	Create Device	lvm lv	ol-swap	
10	Create Format	swap	ol-swap	
11	Create Format	ext3	sda1	/boot

Cancel & Return to Custom Partitioning Accept Changes

Seventh Open KDUMP

SYSTEM

	INSTALLATION DESTINATION Custom partitioning selected	 KDUMP Kdump is enabled
	NETWORK & HOST NAME Not connected	 SECURITY POLICY No profile selected

- Enable kdump ✓
- Automatic Memory Reservation
- Then Click Done

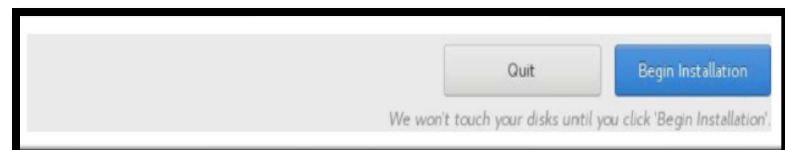

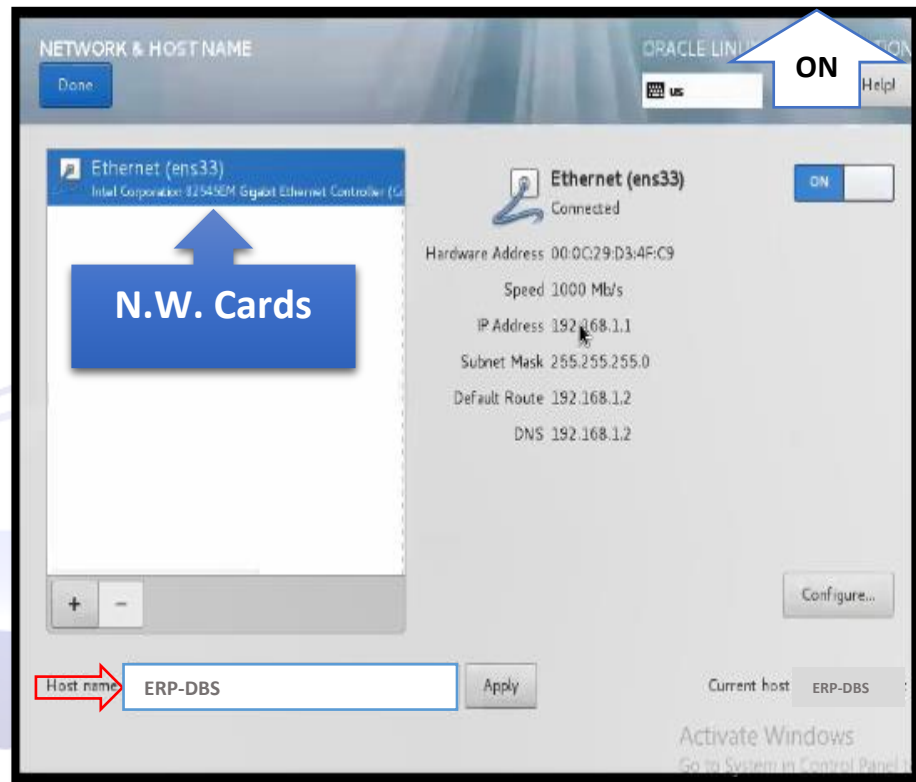

Eighth NETWORK&HOSTS

* Recommended to put 1 N.W. Card between DB Server

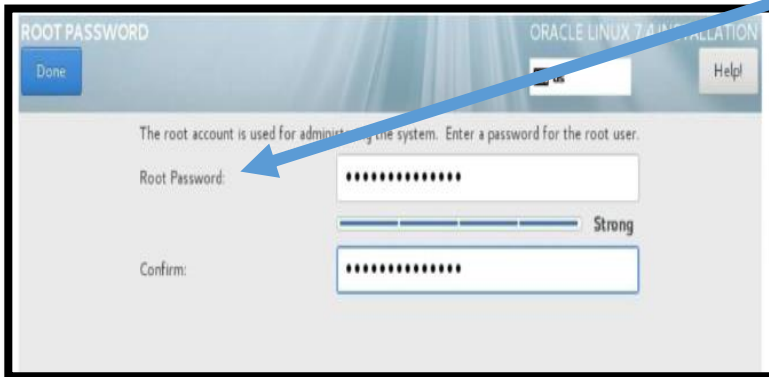

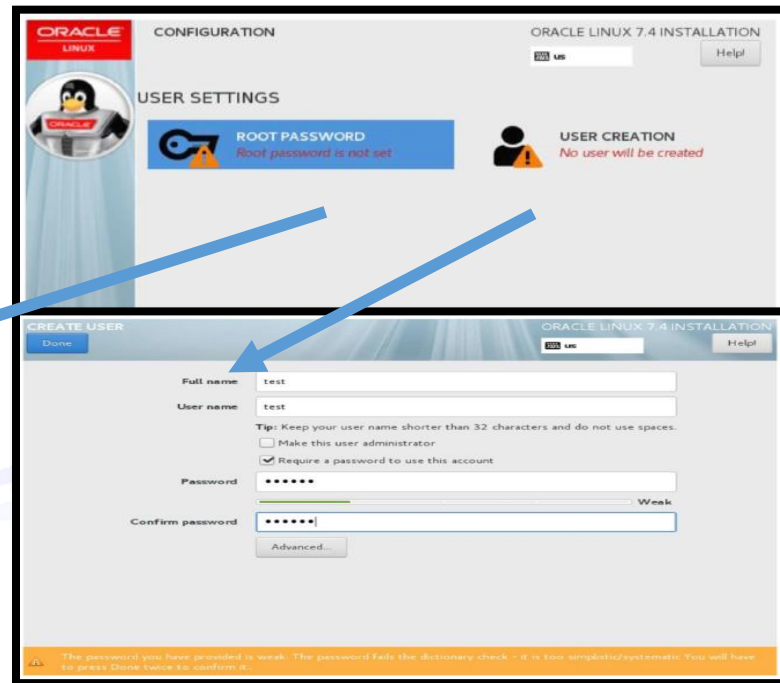

- Open Ethernet then select one N.W. card for DB Server

→ Change Hostname to be **"ERP-DBS"**

Ninth Begin Installation

- ➔ Enter **"ROOT PASSWORD"**
For root user which administrat the system
Ex: Root_P@ss
- ➔ Create New User From **"USER CREATION"**
Then **"Done"**

- After Finishing Installation **Reboot** System
- After Reboot Press on **"LICENSE INFORMATION"** then check **"I Accept the License agreement"**
- Then **Done**
- Then PRESS **"FINISH CONFIGURATION"**
